

Bulletin: 8000 User Reports

**Eight Chances to WIN
an Infratonic 8000**
See page 3 for Entry Form

Dear Friends,

There is so much to share!!! Collectively, you readers have applied the 8000 to many thousands of conditions, have experienced many successes, and have learned many new things. Please help us to help you and other Infratonic users by sharing your experiences with the new Infratonic 8000 and Sonicalm 3. To encourage you, we have created a contest in which we will be awarding 8 new Infratonic 8000's as appreciation for the best contributions in eight categories as shown on page 2.

Response to the new Infratonic 8000, released just three months ago is beyond our expectations. Most early adopters have told us that it is far more effective than anything we have offered before. One doctor reports that he threw away his expensive ultrasounds in favor of an 8000 in each patient room.

Please take the time to share your User Reports and Protocols for the enjoyment and benefit of all!

Sonic Sequencing: A Spectacular Success

Reviews on our upgrades to the 8000 have been very enthusiastic. Usually a small percentage of owners of any new technology prefer the old and familiar. Of the hundreds who upgraded from the 8 to the 8000, just five preferred the 8. Uniformly, their complaint was that the 8000 was not as calming as the 8. As we researched

We created the SoniCalm 3 (released in January) for maximum calmness, muscle relaxation, and pain relief, and have been amazed, not only at how effective it is, but also, at how most pain management doctors prefer the 8000. They keep the SoniCalm for extreme pain, but it appears that most of their pain patients are in the "no-pain no-gain" mindset and would prefer to risk a little additional discomfort with the promise of maximum long term relief.

We have been surprised that we have had no complaints or returns due to increased pain. Mina, our customer information specialist investigated the "additional pain" consideration of the Infratonic 8000. In polling customers she found just a handful who, when pushed, admitted to increased pain during the first treatment. After a few additional treatments they all reported that their pain was relieved and were very happy with their 8000. It appears the Sonic Sequencing is far more effective than we thought:

**Early Bird
Drawing Deadline
Be sure to enter by:
August 15, 2006
for the Special Drawing**

we discovered that Sonic Sequencing had transformed the "feel" of the therapy. (read on to learn how) Since we included much more aggressive signals, we expected a much larger reluctant response than just 5 people. We expected complaints of "more pain", but heard none.

Continued on Page 2

SONIC SEQUENCING: The 4.3 and the Infratonic 8 worked by applying a single chaotic signal continuously. This creates vibrational alignment within the body which promotes pain relief and healing, but, as every force creates an equal but opposite force, the body responds to this Infratonic signal by creating a vibrational pattern which is often experienced as a gradual calming effect, but can sometimes be experienced as increased pain.

Sonic sequencing involves changing to an entirely different Infratonic signal every second or two (randomly of course). Each time the Infratonic signal changes, the body's vibrational response to the previous signal dissolves and a new response begins to form.

Infusing the body with several signals sequentially is more effective than using individual continuous signals because it minimizes the body's vibrational response. In addition, we were able to include very potent signals that were proven to create discomfort on their own, but which are comfortable and very effective when applied in short bursts through the Sonic Sequencing system of the Infratonic 8000 and SoniCalm 3.

It appears that the handful who preferred the 8 over the 8000 were experiencing the body's vibrational response to the continuous random Infratonic 8 signal. With Sonic Sequencing, the signal is constantly jumping from one frequency band to another so the body does not have time to develop a vibrational response. Thus, there is no pressure to sense which might be interpreted as progressive relaxation or increased pain. Sonic Sequencing means greater comfort *and* greater effectiveness.

Enter our 2006 User Report Drawing and **WIN A NEW INFRATONIC 8000**

Thousands of people like you across the country are experiencing extraordinary pain relief and accelerated recovery with the SoniCalm 3 and Infratonic 8000. They are also discovering new applications. Please join with us in this exploration by sharing your user reports. To encourage your participation, we are not only giving a free Infratonic 8000 drawn at random from all legitimate entries, but we are also going to award seven additional Infratonic 8000's to the best entries in seven categories:

- **Best Pain Management Report**
- **Best Diabetic Neuropathy Report**
- **Best Bone Healing Report**
- **Best Accelerated Recovery Report**
- **Best Protocol used on Three or More People**
- **Best Before and After Photos or Images**
- **Best Report on Sweeping**

The **Deadline** to enter your report for the above categories is September 30, 2006.

However, the Early Bird drawing will occur on August 15 so get your reports in early to be eligible for both the Drawing and the Special Awards.

- TO ENTER: 1) Detach or copy the form to the right or print it from our website www.chi.us/win,
2) Complete all questions, sign it and
3) **Fax it** to: (949) 498-0947 or

Mail it to CHI Win
100 Avenida Pico
San Clemente, CA 92672

More information is available at www.chi.us/win

Tips:

Enter as many times as you like.

Every legitimate report increases your chances to win.

Enter early to be eligible for the Early Bird Drawing.

CHI Institute Official 2006 User Report Drawing Application

(use additional page if you need more room)

1) Description of the condition being treated: Case History: (pain level, drugs used, swelling, onset)

2) Protocol or method of treatment: (location, duration, # of treatments, setting)

3) Quantifiable results: (Pain scale, changes in blood, x-rays, photographs, reduction in pain killers, etc.)

4) Quality of Life improvements: (Walking, sleeping, thinking, optimism, recovery, reduced pain)

(Please attach additional pages if required and include photos, x-rays or images)

I am the author of the above statement and hereby authorize CHI Institute to publish it:

Power and Simplicity Give Way to Sweeping

Sonic Sequencing makes the Infratonic 8000 much easier to use than its predecessor. For maximum accelerated recovery, simply select the FULL button and put it where it hurts. However, there are times when sweeping (holding the transducer several inches away from the body and moving it down the body from head to toe) adds to the effectiveness.

Better pain relief: Where the pain moves from place to place or doesn't respond to 'put it where it hurts', and where there is heaviness, poor circulation, or discoloration in the skin, sweeping often dramatically improves results.

Karen Wagner reports that her mother had just undergone open heart surgery and had swelling in her legs and feet from the leg vein harvesting and an old ankle fracture. She did nothing but sweep from the heart to the hands and head to feet. After just one treatment she was amazed at how the color of her mother's face, her voice, and her expression changed. In addition, the edema had already started to decrease and her tissue looked more alive and radiant.

One objection to sweeping is that it involves action-at-a-distance, a common objection from skeptics. Fortunately, controlled research with groups of performance horses confirmed that applying the Infratonic from 10 feet away was found to decrease muscle inflammation as measured by blood serum diagnostic enzyme (AST) levels. This shows that the sweeping with the Infratonic truly does have a therapeutic effect from a distance.

Energy Conditioning: Sweeping for 30 seconds or a minute can clear stagnant energies, making many things easier. Sweeping allows the body to gain a new perspective, releasing what it is holding onto. The cells can move more freely and stagnation can be released from inter-cellular spaces. Sweeping not only

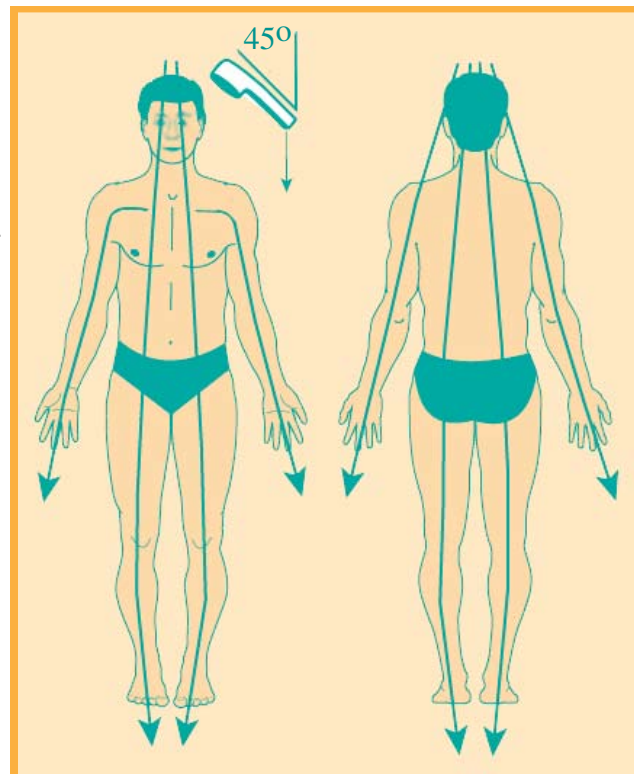

releases stagnation from the body but also from the vital field surrounding the body. It also harmonizes and strengthens the field.

Before therapy: Sweeping the client for just 30 seconds or a minute before starting helps clear out the field, brings all the cells of their body into cooperative alignment, and removes stagnant energies from the body out the hands and feet. This helps the client to relax and makes it easier for the therapist to get down to the important work.

After Therapy: Sweeping the client at the end of the session helps bring the client into a clear, balanced, grounded state, harmonizing the energy field.

Sweeping the therapist after the therapy helps the therapist to clear out energies that might have been picked up from the client.

The Infratonic 8000 can stand alone without sweeping, but is a more versatile tool when sweeping is included.
