Scalene Light® Basic Operation

- 1. Charging** – When you need to charge the Scalene Light (SL), and whenever the red LED ① blinks (indicating the battery is low), plug the charger into any socket (100-240V) and into the SL at point ⑥ for 90 minutes for a full charge, which will provide from 3 to 30 hours of operation (depending on the settings used). The red LED will turn from yellow to green while charging and will shut off automatically when fully charged.
- 2. ON/OFF** – Hold down the middle button for 1 second to switch the Scalene Light ON or OFF.
- 3. Timer** – To select the desired timer function, press the Left button repeatedly until you find the desired setting: 10 Minutes, 40 Minutes, or Intermittent (3 minutes on, every 3 hours).

4. Signals – To select between the three signals, press the Right button until the desired light illuminates.

5. Basic Treatment Guidance – Push the On/Off button to activate the Scalene Light, then push the SIGNAL button to select the desired signal. Start with Clear, use Penetrate if necessary, and finish with Soothe. Most rooms can be cleansed in 2 to 5 minutes. Where heavy congestion is present, remove through multiple applications hours or days apart to allow the space to accommodate gradually to the increased freedom. Use the timer if you want to limit the minutes of operation or to set it to operate intermittently, 3 minutes every 3 hours.

Signal Description

Penetrate – Breaks up heavy congestion. Can reach congestion along the projected beam up to 50 feet away. For happiest spaces, direct the beam into the congestion from several directions and keep the Scalene Light moving during application. Apply sparingly and follow with Clear and Soothe to leave the space smooth and soft.

Clear – Dissolves moderate congestion in most spaces. Stand 10 to 30 feet away from the congestion and apply with spiral and figure 8 motions from several directions. Follow with Soothe.

Soothe – Disperses mild residual congestion leaving a space soft and joyful.

*Think of **Penetrate** as breaking rocks into pebbles, **Clear** as grinding pebbles into sand, and **Soothe** as dissolving sand into fine dust which dissolves into the space providing a fresh, fertile environment.*

Treatment Guidelines

This is an environmental conditioner, and is not intended for use in applying directly to people or animals. If a person is agitated or uncomfortable, treat the space around them and especially the spaces they regularly occupy, such as a chair, desk, bed, and car. Clearing these spaces will help people to feel much more comfortable in the spaces they habitually occupy. It is important to cleanse both the home and the workplace.

Specifications

Description	The Scalene Light produces a linear electric vector potential which is modulated at between 17 and 49Hz that entrains the photons of LED lights to dissolve environmental congestion.
Battery Specs	3.6V, 700mAh NiCd rechargeable battery
Battery Life	Roughly 3 to 30 hours, depending on intensity (signal) setting used
Charger	100-240V, 50/60Hz, 9V
Charging Time	1.5 hours for full charge, automatically shuts off when charged
Recharge	When BAT light is lit
