

Is there Sound Science behind your pendant? YES!

We live in a world that is bombarded by Ionizing ultraviolet Photons, which enter the body through the air and by transmission through power distribution systems, Wi-Fi, and cell phones. This Ionizing UV creates free radicals in the body, which have been shown to cause disease.

The *VitalHarmony Pendant* is composed of a mineral core wrapped in a conducting wire and an organic fiber. It is highly efficient at absorbing ionizing electromagnetic radiation between 200nm and 280 nm) through the magnetic field produced by the heart and circulatory system which surrounds the body. The pendant then transforms the frequency of this energy to UVA, which vitalizes body without creating free radicals.

By wearing this pendant over the center of the chest you can protect your body from damaging UVC energy.

A blinded, sham controlled study shows substantial reduction (16.7%) in urine free radical end products (as measured with YESYOU LPO test kit, Tokyo, Japan) when compared with a visually identical sham device (1.25%). A larger scale multi-facility study is in progress.

Note: The "P" value is the statistical calculation (0.09), and it indicates that it is close to be statistically significant (0.05) and larger study is necessary.
